Ms. Laszewski,

Thank you very much for taking the time to reply to our email. We appreciate it.

Thanks again,
Karen Goebel

Good Afternoon Ms. Goebel -

Thank you for your October 28, 2014 2:09 PM email regarding the proposed multistate ET Rover Pipeline Project (Federal Energy Regulatory Commission (FERC) Docket # PF14-14-000). Your email identifies concerns you have regarding pipeline safety, potential agricultural and environmental impacts, property insurance and property values.

With our email, we are forwarding your email to Kara Harris, FERC project manager. FERC is the lead federal agency responsible for preparing the Environmental Impact Statement (EIS) for the pipeline project. Consequently, if you want your issues and concerns considered and addressed by FERC, we recommend you send your comments directly to FERC for their consideration.

EPA has agreed to be a cooperating agency during the FERC EIS process for this project. EPA will also provide EIS scoping comments to FERC and independently review and comment on FERC's Draft EIS and Final EIS under our NEPA and Section 309 Clean Air Act authorities.

If you have questions or would like to further discuss EPA's role in FERC's EIS process for this project, you may call me at 312-886-7501.

Virginia Laszewski

Subject: ET Rover Pipeline

Dear Ms. Laszewski,

We live on a 17 acre farm in Wooster, Ohio with sheep and horses. We are NOT in support of the ET Rover (docket PF14-14) pipelines proposed to run through Wayne County, Ohio which is one of the most densely populated rural areas in Ohio. It does NOT benefit the landowners in this county and poses serious safety issues. These two 42" high pressure pipelines and proposed compression station will diminish our local quality of life and character of our rural community. We are concerned that the proposed pipeline route will impact not only the productivity of our local agricultural lands, but also represent a direct safety hazard as these high-pressure gas pipelines will be located within 250 feet of many residences, including our own. ET Rover will also be boring under many streams and roads, and it is unclear what impact this activity may have on the local groundwater sources and our water wells. Not to mention issues with future use of land and potential issues with the sale of lands containing pipelines and increased property insurance costs.

We would welcome the opportunity to share our concerns in more detail with you.

Thank you kindly,
Karen and Charles Goebel
